

DEPARTMENT OF ORAL IMPLANTOLOGY

INTRODUCTION

Dental Implantology is concerned with the replacement of missing teeth and supporting oral tissues with dental implants. These implants are inserted into the jawbones and support a dental prosthesis and are retained because of the intimacy of bone growth onto their surface. This program aims to provide dental practitioners with a broad dental-implant experience.

To develop a critical understanding and the ability to evaluate the clinically, the theory, practice and associated research applied to the practice of dental Implantology as a mode of referred treatment. Oral Implantology is relatively new field in India and qualifies for one of the most expensive treatment related to dentistry. Maxillofacial implants are also an upcoming field requiring special attention and expertise.

It provide you with the opportunities to apply within the primary clinical care setting, the theory, practice and associated research in the provision of dental Implantology.
